

of world's population believe herbs are effective and safe for daily primary health care needs. But there is not enough evidence about their efficacy and safety obtained from randomized control trials.

Acknowledgement

We would like to thank Clinical Research Development Center of Ghaem Hospital for their assistant in this manuscript. This study was supported by a grant from the Vice Chancellor for Research of the Mashhad University of Medical Sciences for the research project as a medical student thesis.

Conflict of Interest

The authors declare no conflict of interest.
